

Buttonhead Phillips Screws

Model SPHPPSM()-(L)

PPS Polyphenylene Sulfide / Advanced Engineering Plastics

PPS is a kind of semi-crystalline, high-heat thermoplastic polymer that offers exceptional dimensional stability for precision-molded components needing to withstand prolonged, high-temperature service. Its inherently flame retardant and chemical resistance qualities make it competitive to PEEK and fluoropolymers.

Product Properties

1. Outstanding long-term heat resistance properties (200-240°C).
2. Minimum molding contraction rate and low moisture absorption.
3. Outstanding chemical resistance.
4. High mechanical strength and rigidity. Outstanding anti-fatigue and anti-creep properties.
5. Flame retardant (UL94V-0 without inclusion of flame retardant agents)
6. Offers outstanding electrical properties at high temperature, high humidity and high frequencies.
