

Threaded Rod

Model TRMCM()-L

MC Nylon *Monomer casting nylon / General Plastics*

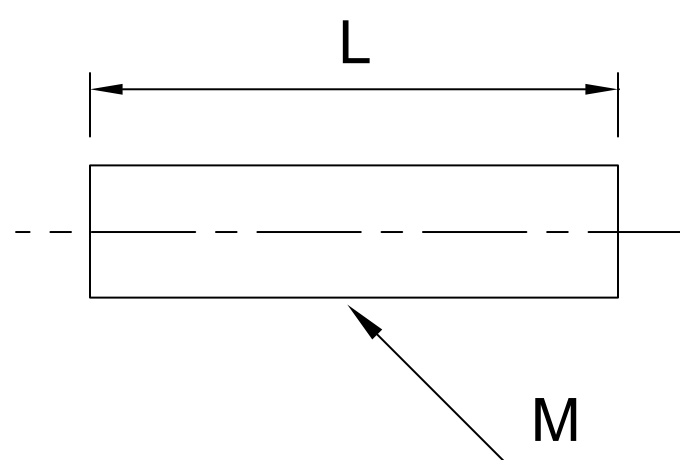

Monomer casting nylon boasts “plastic in place of steel and outstanding performance” and is very versatile. It features light-weight, high strength, self-lubrication, wear resistance, rust-free, and insulation; a versatile engineering plastic with applications covering almost every industrial field.

Characteristics

1. Wear resistant.
2. Twice as good as traditional nylon in mechanical strength, rigidity and impact strength.
3. Low water absorption and good dimension stability.
4. Chemical stability.
